

Internet Link Load Balancing Solution for **Hospitality Industry**

AT A GLANCE

The Peplink Balance is a reliable, cost-effective, and full-featured Internet Link Load Balancing solution that caters to a diverse range of hospitality environments.

It provides the flexibility to load balance between multiple Internet connections, such as DSL and cable, for increasing Internet bandwidth, reliability, uptime, and reducing the cost of having expensive leased lines. The user-friendly Web Admin and Reporting Service help you to manage your network easily and intuitively. User control and bandwidth QoS features make Peplink Balance the best networking router for hotels and motels of all sizes.

Constant Quality Internet Access.

Business travelers require high-quality broadband Internet access. The Peplink Balance is an extremely reliable load-balancing router that works with your existing Internet service provider and allows you to easily combine as many as thirteen Internet services for reliable connectivity and increased overall bandwidth. Advanced user-group and traffic management features make it simple to distribute and control the amount of bandwidth available to guests, staff, and management.

You Need More Bandwidth.

To meet the challenge of providing high quality Internet service, the Peplink Balance works with your existing Internet service and allows you to effortlessly add low-cost DSL and cable-modem services to increase overall bandwidth. As many as thirteen Internet services can be combined to provide as much as 1.5GB/s bandwidth, more than most facilities will ever need.

100% Internet Uptime.

Many facilities in the hospitality industry still rely on a single service provider for Internet access, so run a much higher risk of downtime. The Peplink Balance eliminates downtime by using inexpensive DSL or cable services as redundant Internet connections. When a service failure is detected, the Peplink Balance will automatically re-route traffic to a healthy link. This transparent failover feature eliminates Internet service interruptions and maintains incredibly reliable Internet access for hotel guests and management.

Prioritized Internet Traffic.

The Peplink Balance's Outbound Traffic Management feature allows your staff to easily prioritize VPN, VoIP/SIP, and other critical applications through your best Internet link while email and non-critical web browsing traffic can be pushed across less-expensive cable and DSL connections. Traffic management also ensures that your staff and management always have quality Internet service, improving their ability to maintain smooth communications with company services and provide quality concierge services to guests.

Peplink Balance Multi-WAN Routers

Case Study of Beachcomber Hotels, Mauritius

Demand for Internet bandwidth has been increasing in the hospitality industry. Get more bandwidth by adding extra low-cost Internet links. Advanced QoS allows you to limit individual user bandwidth and prioritize traffic. Using Peplink Balance, smooth Internet access can be guaranteed for every guest.
